ABSTRACTED-PUB-NO: WO 9747292A  
BASIC-ABSTRACT:

Use of an H2 antagonist in the manufacture of topical formulations to reduce the incidence of colds and similar illnesses is new.

The antagonist is preferably cimetidine, etintidine, ranitidine, ICIA-5165, tiotidine, ORF-17578, luptidine, donetidine, famotidine, roxatidine, pifatidine, lamtidine, BL-6548, BMY-25271, zaltidine, nizatidine, mifentidine, BMY-52368, SKF-94482, BL-6341A, ICI-162846, ramixotidine, Wy-45727, SR-58042, BMY-25405, loxtidine, DA-4634, bisfentidine, sufotidine, ebrotidine, HE-30-256, D-16637, FRG-8813, FRG-8701, impromidine, L-643728 or HB-4-08 (especially cimetidine or ranitidine)

USE - Topical application of an H2 antagonist to the gingival or oral mucosal tissues reduces the incidence of colds in susceptible individuals. Effective amounts are 5 g mouthwash or 0.5 g toothpaste. Contact of the composition with oral cavity soft tissue afflicted with gingivitis or periodontitis should be for at least 15 (especially 30-60) seconds. The composition is rinsed out with water following contact. Frequency of contact is once per week to four times per day, especially once or twice per day.

ADVANTAGE - For individuals with heart disease, hypertension, diabetes or thyroid disorders, oral drugs such as decongestants could pose a risk of unfavourable drug interactions and may cause an adverse reaction. It is therefore desirable to deliver relief from specific nasal symptoms via compositions without the need for such active agents.
